ADDITIONAL INFORMATION

I have taken several courses in the area of software development, all with certificates, covering JavaScript (basic to advanced), TypeScript, NodeJS, Database, NextJS, Web Accessibility, Agile Development, Scrum and Web Design. I develop complete web applications, from the back-end to the front-end, including application deployment. I actively participate in challenges and competitions on HackerRank, accumulating more than 4 thousand hours of practical experience in software development. I am a proactive, self-taught professional focused on solving problems, with strong persistence. I have already started several personal projects using the technologies I learned, such as an Account Control system, software for Lawyers, a Call Control system and a Blog system with a timeline for companies, among others.
